

Oriel

Bringing iManage Work into BlackBerry Workspaces

Make the connection

The Oriel connector allows iManage Work users to access and share documents using BlackBerry Workspaces giving greater control and protection of your content.

Now your users can have the best of both worlds. They can continue to use iManage to create, manage and collaborate on projects from anywhere on any device. At the same time, BlackBerry Workspaces reduces the risk, complexity and cost of sharing information created in iManage across and beyond your organisation. It's a win-win situation thanks to Oriel.

BlackBerry Workspaces

BlackBerry Workspaces for secure file sharing and collaboration

BlackBerry Workspaces provides secure file storage, synchronisation and sharing for every use case and budget.

Whether you need to enable personal productivity, facilitate team collaboration, or mobilise and transform your entire business, BlackBerry Workspaces is the best choice for secure file collaboration.

With BlackBerry Workspaces, file-level encryption and user access controls let you maintain control of your content even after it leaves your firewall. Workspaces also embeds digital rights management (DRM) protection in your files. That means you can control what the recipients can do with files once they gain access to them.

Oriel benefits

- Connect from anywhere and have a real time view of iManage Work
- Provides a view of My Matters for each user based on the My Matters in iManage Work
- Allows users to view the documents that they have access to in iManage based on their permissions in iManage Work
- Allows users to upload, update, rename or delete a document to a specified folder based on their permissions in iManage Work
- Allow users to create, rename or delete a folder based on their permissions in iManage Work
- Reduce the cost of sharing documents outside of the organisation
- Save time being able to share any document to any client anywhere

Oriel

Bringing iManage Work into BlackBerry Workspaces

More productivity

As well as increasing file security, Workspaces can make your organisation more productive. Users can view, edit, comment and collaborate on files on all major device platforms, including Microsoft Outlook, Microsoft Office, Office 365 and OneDrive. Plus, the Oriel connector now makes it possible to use iManage, while seamlessly integrating Workspaces secure file sharing capabilities.

Workspaces lets your employees work more effectively and safely with contributors from outside your organisation. This is vital in a world where core business operations are being outsourced and vendor, partner and customer ecosystems are growing at a rapid rate.

A flexible security policy model lets you create secure collaborative workspaces. You can control access and assign file permissions at the user, group and domain level. Furthermore, you can extend your security perimeter outside your firewall. This makes it possible to collaborate with outside users without the risk of losing control of core IP or exposing sensitive information.

iManage becomes more effective and secure with Workspaces

- **Improve productivity:** Suggested email filing keeps users ahead of inbox overload
- **Better decision making:** Document timelines, dashboards and analytics cut through clutter enabling faster, better decisions
- **Find everything:** Searching across all work product (documents, emails, images) is automatically tuned to your work style
- **More responsive:** Secure mobile access means users can view and edit their work from anywhere.

Oriel

- the connector for the best of both worlds

By connecting iManage Work to BlackBerry Workspaces you can manage your online communications and content securely, and confidently share files. Moreover, you can empower your workforce to be more efficient, wherever they are, turning lost time into productive time.
